

1 Anthropic API key — switch the AI on

≈ 5 min

Unlocks: chat assistant, AI Import, offer-PDF reader

- ☐ console.anthropic.com → API Keys → Create key (name it “NexMoney BackOffice”).
- ☐ supabase.com/dashboard → nexmoney-backoffice → Edge Functions → Secrets → add:
`ANTHROPIC_API_KEY`
- ☐ Test: open the back office, click the ♦ button (bottom-right), ask “What’s due today?”

2 Azure app registration — let it read Outlook

≈ 10 min

Unlocks: client emails matched to cases, email triage in My Day

- ☐ portal.azure.com → Microsoft Entra ID → App registrations → New registration.
Name “NexMoney BackOffice” · single tenant · no redirect URI needed.
- ☐ From the Overview page, copy the Tenant ID and the Application (client) ID.
- ☐ Certificates & secrets → New client secret (24 months).
Copy the secret VALUE immediately — it is only shown once.
- ☐ API permissions → Add → Microsoft Graph → Application permissions → Mail.Read,
then click “Grant admin consent” (needs your M365 admin login).
- ☐ Back in Supabase → Edge Functions → Secrets → add all three:
`MS_TENANT_ID` `MS_CLIENT_ID` `MS_CLIENT_SECRET`

3 Turn Outlook sync on in the back office

≈ 2 min

Unlocks: automatic sync every 10 minutes while the app is open

- ☐ Back office → Settings → “Outlook & AI” → set Outlook sync to Enabled.
- ☐ Mailboxes: leave blank for all staff, or list them (daniel@..., wayne@..., luke@..., kim@...).
- ☐ Today screen → “■ Sync Outlook”.
Only emails from senders matching a client's address are stored — no noise.
Most clients still have no email on file (see note on page 2).

4 Resend — let queued emails actually send

≈ 10 min

Unlocks: rate-end reminders, welcome/docs/offer updates, fee requests

- ☐ resend.com → Domains → add nexmoney.co.uk → add the DNS records it shows → Verify.
- ☐ resend.com → API Keys → Create key, then add it in Supabase → Edge Functions → Secrets:
`RESEND_API_KEY`
- ☐ Emails send daily at 08:00 UTC automatically, or instantly via “Run automation” / one-click actions.

5 Five-minute smoke test

≈ 5 min

Unlocks: confidence it all works before the team uses it

- ☐ Log in — My Day should list overdue rate-end cases with “Send reminder” buttons.
- ☐ Chat: ask “What’s due today across the whole brokerage?” — it should use real data.
- ☐ Chat: “Create a task on the Hitchings case: call re rate end, due tomorrow” — check it appears.
- ☐ Queue a fee_request to a test case pointing at your own email; confirm it arrives (after step 4).
- ☐ Settings → check the four secrets show no “not configured” toasts anywhere.

Worth knowing (not blocking)

- Client emails: most of the 326 imported clients have no email address yet — Outlook matching and automations only work for clients with an email. The AI Import tab handles bulk name–email lists.
- Team logins: Wayne / Luke / Kim addresses were guessed (wayne@, luke@, kim@nexmoney.co.uk) — confirm.
- Compliance: the assistant can only send your approved template emails; free-form drafts are copy/paste by design (AR financial-promotion rules). Marketing-style emails need principal approval first.
- Hardening (optional): an Exchange application access policy can restrict the Azure app to adviser mailboxes only — ask IT, or do later.
